

ABSTRACT:

The invention relates to a system comprising a speech processor for controlling an apparatus (101) with speech commands. The system according to the invention includes a remote control (102) having a microphone (104) for the input speech commands. The system also includes a further microphone (107) for enabling other users of the system to

5 issue speech commands too. The system may have input designation means (105) for user operably designating said microphone (104) and/or said further microphone (170) as a signal source to the speech processor.
